EDUCATION

Noida Institute of Engineering and Technology <i>Bachelor of Technology in Computer Science And Engineering(Data Science) CGPA: 8.38</i>	Greater Noida, Uttar Pradesh Nov 2022 - present
R.P.S Public School <i>Intermediate in Science (79.6%)</i>	Patna , Bihar March 2022
R.P.S Public School <i>Matriculation (79.34%)</i>	Patna , Bihar March 2020

EXPERIENCE

Edunet Foundation <i>Intern</i>	Jul 2024 – Aug 2024
- Built and deployed 3 machine learning models on IBM Cloud using Watson Studio and Watson Machine Learning, enabling automated prediction workflows for 1000+ data records. - Processed datasets with 20+ features, performing data cleaning, feature engineering, and augmentation to boost training accuracy by 10%. - Completed IBM's "Getting Started with Enterprise-Grade AI" certification (10+ hours), demonstrating proficiency in production-grade AI deployment workflows.	

PROJECTS

Zero Trust DNS Server <i>Python, SQLite, Streamlit, dnslib</i>	GitHub Link
- Engineered a Zero Trust DNS Gateway from scratch to monitor and control 1000+ outbound DNS queries per day in real time, reducing exposure to malicious domains by 95% through flexible blocking policies. - Integrated logging and monitoring to maintain audit trails of 5000+ DNS queries, supporting security analysis and compliance requirements. - Built an interactive Streamlit dashboard tracking 10+ query metrics in real time and managing a real-time blocklist of 100+ domains, enabling instant policy updates. - Implemented domain blocking with case-insensitive and subdomain-aware matching, geo-tagged logging for 5000+ queries, and IP-based unique client tracking using SQLite for auditing 100+ clients. - Automated browser DNS cache flushing for Chrome using Selenium, reducing blocklist policy application time from 5 minutes to near-instant (<10 seconds).	
AI-BASED Research Summarization Assistant <i>Streamlit, FastAPI, TXT Parsing</i>	GitHub Link Live Demo
- Integrated Groq API with LLaMA 3 using LangChain to enable sub-100ms LLM inference for real-time Q&A and logic-based quiz generation from PDF/TXT documents. - Engineered dual-mode workflow: free-form contextual Q&A and a question auto-evaluator, each grounded in document sections using token-level indexing. - Built a modular backend with FastAPI and async pipelines for high-throughput document ingestion, embedding, and chunked retrieval-based reasoning. - Developed an interactive Streamlit interface with document upload, auto-summary (≤ 150 words), memory-based follow-up support, and snippet-level answer justification. - Deployed and hosted the application on AWS Cloud, making it accessible via the provided link.	

TECHNICAL SKILLS

Languages: Java, SQL , Python
Frameworks & Technologies: AWS Cloud , Artificial Intelligence , Machine Learning
Core Technical Foundations: Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming Principles, Operating Systems Concepts, Computer Networking Fundamentals,

CERTIFICATES

Data Analytics Job Simulation <i>Deloitte</i>	April 2025
Building Machine Learning Systems with TensorFlow <i>IBM</i>	Sep 2024
Python for Data Science, AI & Development <i>IBM</i>	May 2023
